To whom it may concern:

I am the daughter of team truck drivers that listen to xm radio everyday of the week while out on the road making there deliveries along the east coast five days a week. Traffic and weather are there worst enemies out there on the road, but with them listening to the xmradio on the news, weather, and local traffic up dates it helps them alot right along with helping the local law enforcement because if there is an accident if my parents can get around it they will. If there is construction work they will try to go around it. If the roads are iced over and too dangerous to go through they will find a spot and stop until its safer for them to go through. I do realize that not all truck drivers do this but there are many who do because there safety is important to them. While they are out there working they dont have the chance to watch the news so they dont get the updates of what is going on around the world if they arent able to listen to the Around the world news broadcasts on the xm radio. They pay for there subscription and if they are pleased with what they are getting from it I do not see why or how the NAB's petition 04-160 should enterfere with there satisfaction of what they are paying for. So I am asking you FCC to reject the NAB's petition, so that these people who subscribe for this service can get exactly what they have been paying for and enjoying.

Thank-you for your time.

Sincerely,  
Tessa A Libby
